

LOSING MONEY IS FUN! WAIT. NO, IT'S NOT.

THE ROOT CAUSE OF HUGE PROFIT LOSS

Then take a moment to consider all the money you lose to electrical diagnosis. The mystery issues that plague wiring harnesses, especially during a new vehicle launch. The mad search for an electrical failure's root cause. The factory holding area and the vehicles torn apart during end-of-the-line testing. The recalls. The warranty repairs.

Sure, traditional diagnosis can identify electrical issues. But it can't pinpoint a failure's root cause—or reveal its precise location.

PINPOINT MASSIVE SAVINGS

TRACER™ drastically reduces the labor involved in electrical diagnosis and repair. It visually maps the exact location of a wire harness failure—down to the specific pin—so technicians can repair root cause issues with maximum speed and efficiency. This groundbreaking tool:

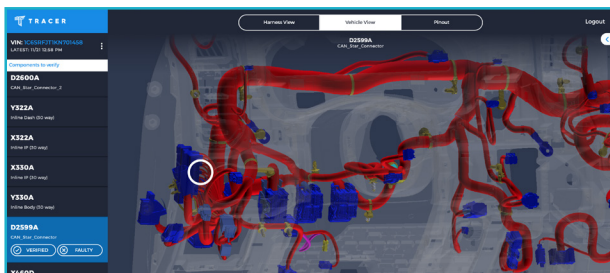

- Works across multiple platforms and plant locations
- Eliminates damage to parts and materials
- Gains intelligence with every session
- Flags common failures, so you can fix them before they spread

GREAT. BUT IT'S A PAIN TO INSTALL, RIGHT?

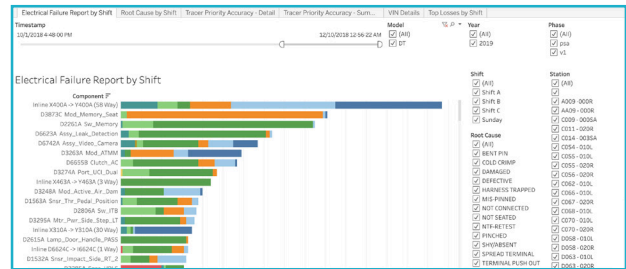

Nope. TRACER is runtime software. It integrates with your existing Tier 1 test system and runs on machines already in your service bay. TRACER requires no new hardware and is easy to use.

You'll start saving money the moment you implement TRACER. And even if that's not your idea of fun, it's definitely a step in the right direction.

NO TEAR DOWNS. NO WASTED HOURS. NO PROBLEM.
