

GET YOUR REPLACEMENT PARTS IN ORDER

THE PROBLEM WITH PARTS

Replacement parts are a tricky business. One wrong component can damage a machine or create huge, unnecessary delays in repair times. You need the right parts to keep your operation online.

But part suppliers change. So do the parts themselves over the course of a product life-cycle. Your component stock becomes obsolete without anybody noticing—and your spare parts warehouse becomes less and less efficient. The next step? Costly mistakes and countless “human errors” in parts ordering.

ACCURATE, AUTOMATICALLY

Our Electronic Parts Catalog solution links your catalog to a central database, so it's easy to maintain an accurate, up-to-date, highly searchable parts catalog.

Our parts ordering solution:

- *Is compatible with all major PLM systems (SAP, AS400, etc.)*
- *Matches with project CAD drawings through departmental PDM*
- *Creates a multi-channel, auto-publishing spare parts catalog*

Thanks to Tweddle Group's Spare Parts Management Software, the Electronic Parts Catalog tracks and incorporates every change in the Bill of Materials (BOM), so each product aligns with its latest required components.

MAKE NO MISTAKE

Just enter the VIN or serial number of the product you're working on and a multi-channel output serves the relevant catalog through your tablet or PC, right down to the spare parts in use by the final client.

Our system lets you search in traditional ways—by part name or number—while exploded CAD and 3D interactive views make it easy to spot and order exactly what you need.

FLIP THE SCRIPT

Old-school parts replacement costs you in machine damage, logistical delays and loss of customer trust. Our electronic parts catalog turns that equation on its head, so you can create higher business volume and better relationships with your final customers.

Tweddle Group's product enables best-practice methodologies regarding:

- *Repair kit definition*
- *Suggested spare parts*
- *List of first stock parts*
- *Component validation with expiration date*
- *Consumer components and more*

These practices, combined with the software package itself, radically increase efficiency and improve your overall productivity.

ELECTRONIC PARTS CATALOG. THE RIGHT CHOICE FOR REPLACEMENT PARTS.
